

SPHERE IMPACT BUFFERS 83300

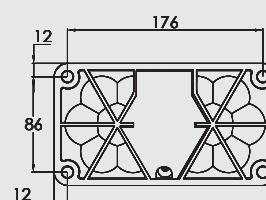

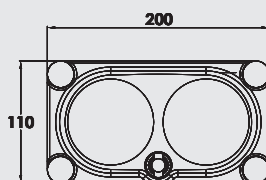

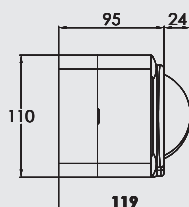

Dimensions (mm): 200x110x118
Weight (kg): 3.4

TECHNICAL FEATURES

Material: body in Nylon PA 66
Internal spheres in Nylon PA 6
External sphere in NBR (Sh 85)

Production Process: Injection Molding

The sphere impact buffer is an innovative product both for its materials and for its functionality. Made entirely of plastic and thanks to its unique geometry, it allows to absorb the perpendicular and orthogonal force that is impressed during a collision. The spheres disposed outside and inside distribute the forces evenly and ensure maximum functionality in all working conditions.
